Introduction

This document is the module guide for the final year project module “Group Industry Project” that you will take as a student at AASTMT enrolled on the University of Northampton dual degree programme.

The technical work that you undertake for AASTMT will be the same as for UON, but there are additional assessment requirements for UON and these are detailed in this guide.

Teaching Staff

The two module leaders are:

- Dr Mike Hamlyn (michael.gowerhamlyn2@northampton.ac.uk)
- Dr Douglas Mills (douglas.mills@northampton.ac.uk)

They are supported by a range of other tutors, and each project group at AASTMT will be allocated a tutor who will supervise you throughout the year.

- Zaigham Mahmood Zaigham.Mahmood@northampton.ac.uk
- Michael Hamlyn Michael.GowerHamlyn2@northampton.ac.uk
- Keith Moffitt keith.moffitt@northampton.ac.uk
- Alaa Hassan: Alaa.Hassan@northampton.ac.uk
- Omoyeni Ajayi Omoyeni.Ajayi@northampton.ac.uk
- Bayan Aldouahji bayan.aldouahji@northampton.ac.uk
- Faris Elasha Faris.Elasha@northampton.ac.uk
- Murtada Dohan Murtada.Dohan@northampton.ac.uk
- Nahid Salimi Nahid.Salimi@northampton.ac.uk
- Moses Sokunbi Moses.sokunbi@northampton.ac.uk

Project Learning Outcomes

The module specification describes the outcomes of this module as:

Module Learning Outcomes
On successful completion of the module, with limited guidance students will be able to:
Subject-Specific Knowledge, Understanding & Application
a) Critically evaluate the processes and relationships necessary for successful completion of a technical activity/project.
b) Critically evaluate and apply processes and procedures in relation to managing and developing an industrial project.

c) Investigate and analyse technical problems, synthesise, evaluate and apply solutions, research new topics / subject areas as necessary, apply advanced technology-based theory and practice.
d) Evaluate and apply project management techniques to ensure timely completion of a project including contingency planning.
Employability & Changemaker Skills
e) Effectively communicate information in written, visual and digital formats as part of a team
f) Develop skills of critical self-reflection and personal effectiveness

Project Assessment

There are two assessment points for the project module, and these are detailed on the Module Description

<u>Assessment Activity</u>			<u>Learning Outcomes</u>	<u>Weighting (%)</u>
Code	Assessment Type	Assessment Deliverables		
AS1	Assignment	A group project proposal and an individual reflection on contribution to planning of the project (3000 words)	d, e, f	20
AS2	Assignment	A group project report and individual reflection on contribution to, and outcomes of the project (9000 words)	a-d, e, f	80

Further details of marking criteria are provided later in this handbook.

Tutor Meetings

You will be invited to meetings with your UON tutor throughout the year. These will take place over Microsoft Teams so you need to ensure that you have access to this software. You will also be expected to use your UON student email address in **all communications with your tutor** – the university does not support the use of personal email addresses.

Tutor meetings will be held with the whole project group at key points in the year to cover issues such as:

- Introduction to module and requirements

- Preparation for assessments
- Information on referencing and use of AI
- Feedback on draft documents
- Feedback on assessment results

You will usually get at least a week's notice of when your tutorial will be – if the date and time is not suitable for the group, then you must contact your tutor IMMEDIATELY to request to reschedule.

You will be expected to attend tutorials on time and if requested to submit documents for review in advance of a meeting. You must make sure that these are submitted at the time requested to allow your tutor to review them properly.

Assessment and Marking Criteria

Project Proposal AS1

The first item of assessment is the project proposal.

This will be submitted in February, some time after you have commenced your actual project, but this provides an opportunity for you to clearly identify what the project is setting out to achieve, what the planned timescales are, and what the expected individual contributions to the project will be.

Please note – this is NOT a progress report. you will have a very tight word limit to work to, and we expect the document to meet the specification of a proposal. There are no marks to be gained from submitting a lengthy summary of work to date at this stage.

The proposal document will comprise two sections:

A group proposal of 2000 words (+/- 10%) – this is identical for all students in the group.

An individual proposal of 1000 words (+/- 10%) – this is individual to each student in the group.

Group Proposal

The proposal should describe what you are going to do and how you are going to do it. Essentially its purpose is to indicate whether your plan is feasible or not. It will be supported by a review of the literature.

The marking scheme below shows how marks are awarded for this part of the proposal.

Element (LO assessed)	mark	Comment
Aim & Objectives	5	An overview of the project and of what you intend to achieve by carrying out this project
Background Information and literature review	20	A short review to show how you engaged with the literature and previous work in the field
Project Plan	20	This section will be a detailed plan of your project activities. It should include a Work Breakdown Structure (with separate workstreams for grouped activities, as taught in ENG2060)
Gantt Chart	10	A Gantt chart that shows the activities from the work breakdown structure and key deliverables over the timescale of your project
Referencing	5	References – all references must be provided using Harvard format

Individual Proposal

The individual component of the proposal will show your individual planned contribution to the project and is summarised in this marking scheme:

Element (LO assessed)	Mark	Comment
Details of individual contribution to project	20	What will be your planned individual contribution to the project?
Reflection on Individual contribution to Project Plan and	10	Provide a reflection on how your contribution will contribute to the successful delivery of the plan, linking this to your strengths and weaknesses and how your will contribute to the team.

individual Gannt Chart		
Summary of individual progress to date	10	A brief summary of your activities to date and how these relate to the group project plan.

Final Project Report AS2

For the final report, you will need to create a separate document for UON in addition to the more lengthy report that you submit to AASTMT. However, you will be able to use some of the information in the AASTMT report to help you to write your UON submission.

Group Project Report

The group project report provides a summary of the work you carried out for your project and will be marked using this rubric. The word length of the group report should be 7500 words +/- 10%

Since this report is a lot shorter than the report that you will write for AASTMT you will need to be selective in the information that you write. You may have shared your main report with your tutor, so they will be aware of the full scope of your work, and will be able to advise on what should be included in this shorter summary report.

Note – you cannot just cut and paste your AASTMT report – UON are marking to different criteria and so you will need to select the literature, results and analysis carefully as you have a much shorter word limit.

Your tutor will provide information on what is required and will provide feedback on drafts in advance of submission

Element (LO assessed)	Mark	Comment
Introduction	5	A summary of the project aims and objectives, the rationale for the project, the main results
Literature Review	10	Details of literature and previous work used to inform the project. This should include critical discussion of references used.
Project Development	15	A summary of how the project was carried out, the methodology and the evidence of the activities that the group undertook

Project Results	15	A critical review of the key results of the project
Conclusions and recommendations for further work	10	The conclusions should be a critical evaluation of the success or otherwise of the project with clearly identified activities for future work
References	5	All references cited in the text listed using Harvard referencing format

Individual Project contribution

The individual contribution section allows us to identify the individual's contribution to the project and to award marks accordingly.

In this section you will reflect on:

- how they have contributed to the project
- provide a reflection on how well the group has worked
- how closely you followed the project plan
- reflect on wider considerations such as sustainability and ethics

Again, your tutor will provide information on what is required and will provide feedback on drafts in advance of submission

The word length for this is 1500 words +/- 10%

Element (LO assessed)	Mark	Comment
Summary	5	A summary of the project aims and objectives, the rationale for the project and the main results. This should be written in your own words
Individual Contribution	10	A summary of your individual contribution to the project, related to the activities identified in the original project plan
Reflection on Project and progress	10	A reflection on the progress and outcomes of the project. This should include a reflection on how well the team worked (with reference to theories on the characteristics of high performing teams). It should also include a reflection on how well the original project plan was followed and what lessons have been learned
Broader Issues	15	In this section you should provide details on how you considered broader issues relating to your project, not just technical ones. This could include ethical issues (such as use of personal data), sustainability issues or environmental issues.

Overall Grades

You will see in NILE the mark you have received for each individual or group piece of work.

The assessment board will consider your overall mark for the first assessment (group + individual combined) and for the final assessment (group + individual combined)

These marks will then be used to determine your final grade for the project module.

Hand in Dates

The final hand in dates will be published on NILE

Provisional hand in dates are:

Proposal (group + individual) Monday 16th February 2026

Final Report (group + individual) Monday 20th July 2026

Note hand in time will always be set to 21.59 UK time, which equates to **midnight Egypt time**.

Resits for any items of assessment will take place after the exam board has made a decision.

Resits

If you get an overall fail grade in the module, you will be required to carry out resit work.

This will be determined by the assessment board. You will need to look at the student portal to identify exactly which pieces of work you need to resit. You may pass the module having failed certain components of assessment – do not assume you have to do a resit without checking your overall grade. If there is any uncertainty, please contact the module leader.

Referencing

Students must use Harvard referencing. Guidance on referencing is available on the through the UON Skills Hub at <https://skillshub.northampton.ac.uk/referencing/>

In addition, your tutor will cover referencing in tutorials and there is a handout available in the NILE course that shows how to insert Harvard references and to build a bibliography using Microsoft Word – with tools like these there is no excuse for poor referencing!

It is important that ALL material that is used to support your project report and proposal is correctly cited and referenced.

All work submitted will be checked for originality through Turnitin, and tutors will expect that students have been diligent in the way that they have used and cited references. Your tutors will provide guidance on how to reference work correctly. You should be aware that failure to do so may lead to your work being investigated for academic misconduct.

Use of Generative Artificial Intelligence

AI is a tool that is embedded into software such as Microsoft Word and other office applications. There is also a wide range of free and paid for external AI tools available. In response to this, UON commits to supporting staff and students to become AI-literate.

Information produced by AI may be subject to bias, be inaccurate or be poorly referenced. It may not be clear where material has originated from, which raises copyright concerns.

Students should make themselves aware of the University's position on AI which can be found at:

<https://mynorthamptonac.sharepoint.com/sites/student/Pages/artificial-intelligence.aspx>

All use of AI must be acknowledged, cited, and referenced, and in most instances an appendix should be provided.

Your tutors will cover ethical use of AI in tutorials, but you should be aware that we check work, especially faked references lists diligently and many students have failed modules and assignments because of inappropriate use of artificial intelligence.

Generative AI & university work.

ETHICAL USE

Starting work

- Explaining complex concepts simply
- Generating ideas as a starting point
- Brainstorming to provide different perspectives
- Helping to locate sources
- Supporting the planning of a piece of work

Creating things

- Generating content or artefacts if the assignment brief permits AI collaboration, and you clearly attribute it's use
- Creating flash cards or other revision resources

Checking work

- Can make suggestions to improve grammar or formatting
- Can provide correct referencing and in-text citation advice
- Can provide instant feedback on work to improve quality before submission

UNETHICAL USE

Plagiarism

Using AI-generated content verbatim without proper citation or presenting AI-generated work as your own is unethical and is plagiarism. This would be the same if you took a definition from a Google search

Assignment outsourcing

Using AI to create assignments, essays or projects without any personal input or understanding undermines the learning process and is considered academic dishonesty. This is the same as a tutor or friend creating your work for you and you claiming it as your own.

Misrepresenting abilities

Using generative AI to complete tasks that are beyond your understanding and presenting the results as your own. This is the same as copying someone's assessment or paragraph and tweaking it to make it look different.

Improper references

Sourcing references via AI and not checking the validity and relevance of the information by going to the source text. Claiming you used a source when you didn't - you got it from ChatGPT. AI tools are notorious for faking references.
